Education

Saraswati College of Engineering, BE in CSE (DS)

June 2023 – May 2027

- CGPA:7.89/10 | Coursework: OS, DBMS, DSA, OOPs, AWS, AI, ML

Technical Skills

Languages: Python, JavaScript

Tech Stack: React, Next.js, Node.js, Django, FastAPI, PostgreSQL, Redis, Docker

Tools & Platforms: Git, GitHub, DigitalOcean, Vercel, n8n

Work Experience

Backend & AI Engineer @ Assista | Delaware US (Remote)

Dec 2025 - March 2026

- Contributed to an AI agent integration platform supporting **100+ third-party applications**, building and maintaining API integrations, authentication flows, and function schemas.
- Developed and enhanced integrations for services including **Trello, HubSpot, Jira, ClickUp, X (Twitter)** resolving production issues across OAuth, API execution, and configuration validation.
- Built new integration for **Clickup** & Implemented **OAuth 1.0 support for Trello** end-to-end, including token management, execution logic, and database migrations, contributing over **1,500 lines of production code**.
- Tested and validated end-to-end workflows across multiple third-party integrations, identified functional and authentication issues, and collaborated with developers to debug and resolve production bugs.

Web Developer Intern @ Mackofy Technologies | Mumbai (Hybrid)

April 2025 - October 2025

- Contributed across multiple products using React, Next.js, Node.js, and Django on performance optimization.
- Optimized UI Responsiveness and Accessibility.
- Collaborated with backend lead to integrate APIs and deploy app on DigitalOcean for 500+ active users.

UI/UX Developer Intern @ Tokihub | Bangalore (Remote)

Feb 2025 - March 2025

- Redesigned web interfaces in collaboration with mentor.
- Developed scalable dashboards using Chart.js and Tailwind CSS, enabling data visualization for records in real-time.

Personal Projects

Animastudio – AI-Powered Text-to-Animation Engine (Python, Manim, NLP)

[Github](#)

- Built a system that converts structured text into mathematical/educational animations using Manim.
- Designed NLP-based parsing to transform input prompts into animation sequences.
- Automated rendering pipeline in Docker for generating visual explanations of concepts.

Remote Browser Control Platform (WebRTC + Docker + Playwright)

[Github](#)

- Built a real-time remote browser platform that streams and controls containerized headless Chromium instances using WebRTC, Docker, and Playwright.
- Integrated Chrome DevTools Protocol (CDP) and Playwright to automate browser actions, manage sessions, and enable live browser control inside isolated Docker containers.
- Architected a full-stack system with Next.js, Node.js, WebRTC, Socket.IO, and Docker, demonstrating expertise in real-time systems, browser automation, and distributed application design.

Tryit - Outfit Image Generation Platform (Next.js, PostgreSQL, Prisma, Redis, BullMQ, GCP)

[Github](#)

- Architected a full-stack AI platform using Next.js, PostgreSQL, Prisma, and Google Gemini, enabling photorealistic outfit image generation while preserving garment fidelity.
- Designed and implemented an asynchronous job processing system with BullMQ and Redis, supporting concurrent AI generation workflows with retry mechanisms and fault tolerance.
- Built an end-to-end media pipeline including drag-and-drop uploads, cloud storage (GCS), AI processing, and interactive before/after comparison galleries with real-time job tracking.

Extracurriculars & Achievements

- President, Coding Club 2025-2026 (SCOE)
- Top 30, Monad Web3 Hackathon – Developed a Web3-based solution focused on real-world use cases
- Organized hackathons with 200+ participants, handling sponsorships, logistics, and mentoring participants.
